Xtender 5.4 Removal of Components from within WebXtender

Using the Xtender web client, login to WX and select Help->Check Installed Components

Click the "ApplicationXtender Web Access Adobe Component 9.1" and follow the installation steps  NOTE: you may install and/or remove the desired components

NOTE: When using the Component Check utility in WX, the Component list will display "ApplicationXtender Web Access Adobe Component 9.1" but the “Current Install Status” portion of the screen will reference version 8.0". Version 8.0 will always be listed as "Not Installed". This is an unavoidable inconsistency that the vendor cannot be resolved by this patch.
Note: If a prior instance of this hotfix was applied and this component was previously installed, choose the Repair option**
